## SUMMARY

---

When I think about my pros and cons, I can say that everything what I know about programming is the result of my hard work. I am self-taught front-end. I know that I am not experienced and there are many things to learn to improve my programming skills, but in addition to my knowledge base, I actively seek everyday to learn more. I am so motivated due to the fact that whenever something is needed to be used in web projects, I have the ability to learn and use it directly in a short period. Currently I am looking for a opportunity to join a company and forge my career as Front-end Developer.

## PROJECTS

---

**REST Countries API**
